PADI™

Since the launch of our first diver's watch in 1965, Seiko has brought to professional divers a stream of innovative new technologies and designs that have made diving safer and easier for the professional and recreational diver alike. Thanks to these advances and to the supreme quality of our diver's watches, Seiko has earned a high reputation of trust in the diving community.

By a strange coincidence, a few months after Seiko's first diver's watch appeared two American dive enthusiasts decided that standards of training in diving needed to be raised and founded the Professional Association of Diving Instructors. Over the past fifty years, PADI™ has become the world's most trusted scuba diving training organization. With over 6,300 Dive Centres and more than 136,000 qualified PADI professional instructors around the world, PADI has issued an amazing 24 million certifications and has done more than any other organization to introduce diving to the world.

Seiko and PADI share a passion for ensuring the safety and enjoyment of divers and for protection of the marine environment, so a partnership felt very right.

To celebrate and promote this partnership we introduce the Prospex PADI Special Edition.

All Seiko P.A.D.I. Special Edition watches
are presented in this special box

KINETIC G.M.T.

Powered by the movement of the wearer. 6 month power storage with power reserve indicator. Hour, minute, second hand and 24 hour hand that can be set to a second time zone independently. Calendar.

PRESAGE ENAMEL

The SEIKO Presage Enamel collection contains special creations whose dials are made, in Japan, of enamel. The Japanese tradition of enamel work has a long history, embracing both white enamelling and the celebrated cloisonné style that has always been so widely admired.

The texture of enamel is pleasing to the eye, the white lustre remains permanently unchanged, and it excels in preventing corrosion. Such qualities make it an ideal material for watch dials, but great skill is required in preparing the enamel to the precise dimensions required. Even the temperature and humidity must be controlled and the material adjusted at every stage to ensure a perfect result. Consequently, every dial is different and has its own specific beauty. The smoothness, the texture and the rich whiteness of the dials do not change with the years, so the beauty of a Presage Enamel dial is forever.

AUTOMATIC CHRONOGRAPH

Powered by the movement of the wearer or by winding the crown. Stopwatch measures 12 hours in 1/5th of a second increments. Approximately 45 hours power reserve. Accuracy +25/-15 seconds a day. Hour, minute, second hand. Calendar.

**Generating Electricity**

The natural movement of your body is sensitively transformed into electrical energy.

Storing Electricity

A high performance long-life **rechargeable** battery stores the energy to power the watch.

Utilising Electricity

Advanced electronic circuitry ensures that the energy is converted with optimum efficiency into a quartz signal.

Circuit Block

Controls voltage and amperage. And by quartz oscillation, it produces a precise watch signal.

SEIKO SOLAR

No Battery Change Required

Powered by all types
of light

Solar cell with high
performance electricity
generation

Energy-efficient
movement with
long power reserve

SEIKO. Solar watch experts since 1977

TRIMATIC

Trimatic symbolises three Seiko inventions that ensure the highest levels of reliability and durability in its mechanical watches.

Diashock

A shock resistant system that was developed by Seiko in 1958, to preserve precision when the movement is subject to impact. It protects the balance wheel, the component most likely to be damaged from shock and vibration. Even compared to other movement parts, the balance staff is extremely thin, being only between 0.07 to 0.08 mm in diameter, or about the same as a human hair.

Magic Lever

In 1959, Seiko invented the Magic Lever spring winding mechanism, which greatly increases the winding efficiency of a watch and shortens the time needed for the main spring to become fully wound. This ingenious V-shaped lever allows all the energy generated by the oscillating weight's motion, whether clockwise or anti-clockwise, to be transferred to the mainspring. It is effective, simple and durable and contributes significantly to the longevity of the watch.

Spron

In 1964, Seiko started producing balance springs in-house, utilising its own specially developed alloy, Spron. Utilised in all our mechanical watches, Spron mainspring and hair spring alloys are exclusive to Seiko watches. Spron features superior elasticity, strength, and corrosion and heat resistance.

AUTOMATIC ANALOGUE (4R36/4R38/4R39)

- Hour, Minute, Seconds (24 hour hand for 4R39)
- Calendar, Day Of the Week (4R36)
- Powered by movement or winding the crown

HOW TO USE

This watch is an automatic watch equipped with a manual winding mechanism.

- When the watch is worn on the wrist, the motion of the wearer's arm winds the mainspring of the watch.
- If your watch is completely stopped, it is recommended that you manually wind the mainspring by turning the crown.

How to manually wind the mainspring by turning the crown

1. Slowly turn the crown clockwise (in the 12 o'clock direction) to wind the mainspring.
2. Continue to turn the crown until the mainspring is sufficiently wound. The second hand will start moving.
3. Set the time and date before putting the watch on your wrist.

HOW TO SET THE TIME, DAY AND DATE (FOR CAL. 4R36)

- Check that the watch is operating, and then set the time, day and date.
- The watch is provided with a day and date function and is so designed that the day and date changes once every 24 hours. The date changes around 12 o'clock midnight, and the day around 4:00 a.m. If AM/PM is not properly set, the date will change around 12 o'clock noon, and the day around 4:00 p.m.
- 1. Pull out the crown to the first click. (The second hand continues moving and the accuracy of the watch is unimpaired.)
- 2. The day can be set by turning the crown clockwise.
- 3. The date can be set by turning the crown counterclockwise. Turn it until the previous day's date appears.
Ex.) If today is the 5th of the month, first set the date to "4" by turning the crown counterclockwise.
- 4. Pull out the crown to the second click when the second hand is at the 12 o'clock position. (The second hand stops on the spot.) Turn the crown to advance the hands until the date changes to the next. The time is now set for the a.m. period. Advance the hands to set the correct time.
- 5. Push the crown back in to the normal position in accordance with a time signal.

HOW TO SET THE TIME (FOR CAL. 4R38 AND CAL. 4R39)

1. Pull out the crown to the first click when the second hand is at the 12 o'clock position. (The second hand stops on the spot.)
2. Turn the crown to set the hour and minute hands to the correct time.
3. Push the crown back in to the normal position in accordance with a time signal.
- Cal. 4R39 has a 24-hour hand, which moves correspondingly with the hour hand. When setting the time, check that the 24-hour hand is correctly set.

ACCURACY OF MECHANICAL WATCHES

- The accuracy of mechanical watches is indicated by the daily rates of one week or so. (Around 25 seconds per day +/-)
 - The accuracy of mechanical watches may not fall within the specified range of time accuracy because of loss/gain changes due to the conditions of use, such as the length of time during which the watch is worn on the wrist, arm movement, whether the mainspring is wound up fully or not, etc.
 - The key components in mechanical watches are made of metals which expand or contract depending on temperatures due to metal properties. This exerts an effect on the accuracy of the watches. Mechanical watches tend to lose time at high temperatures while they tend to gain time at low temperatures.
 - In order to improve accuracy, it is important to regularly supply energy to the balance that controls the speed of the gears. The driving force of the mainspring that powers mechanical watches varies between when it is fully wound and immediately before it is unwound. As the mainspring unwinds, the force weakens.
- Relatively steady accuracy can be obtained by wearing the watch on the wrist frequently for the self-winding type and winding up the mainspring fully everyday at a fixed time to move it regularly for the wind-up mechanical type.
- When affected by external strong magnetism, a mechanical watch may lose/gain time temporarily. The parts of the watch may become magnetized depending on the extent of the effect. In such a case, consult the retailer from whom the watch was purchased since the watch requires repair, including demagnetizing.

KINETIC (5M54/62/84)

- Hour, minute and second hands.
- Calendar (Date).
- Day indicator (5M54).
- Automatic Power Generator.
- Energy Depletion Forewarning.
- Overcharge Prevention Function.
- 6 Month Power Storage.

HOW TO START THE WATCH

When using the watch for the first time be sure to charge the Rechargeable Battery sufficiently by swinging the watch from side to side before setting the time and other functions.

1. Swing the watch side to side at a rate of twice per second.
2. After the watch is swung for approx. 2 to 3 minutes, and the second hand begins to move in one-second intervals there is about six hours of power available. It is not necessary to charge the rechargeable battery fully before you wear the watch. While the watch is on your arm, the Automatic Power Generator will ensure constant operation.

Notes: 1. To charge the rechargeable battery efficiently, swing the watch from side to side, making an arc of about 20cm. 2. No additional benefit is obtained by swinging the watch more quickly or with greater vigor. 3. When the watch is swung, the oscillating weight in the generating system rotates to drive the mechanism. As it rotates, it creates a sound: this is not a malfunction.

HOW TO SET TIME

The Seiko Kinetic series of watches are basic analogue and can be set the same as any 2 or 3 hand watch.

1. Pull out the crown to the second click.
2. Turn the crown to set hour and minute hands.
3. Push crown back to normal position.

Notes: 1. When setting the hour hand, check that AM/PM is correctly set. The watch is so designed that the calendar/day changes once in 24 hours. Turn the hands past the 12 o'clock marker to determine whether the watch is set for the AM or PM period. If the calendar/day changes, the time is set for the AM period. If the calendar/day does not change, the time is set for the PM period. 2. When setting the minute hand, advance it 4 to 5 minutes ahead of the desired time and then turn it back to the exact time.

POWER RESERVE INDICATOR

By pressing Button A once when the second hand is in 12 position the watch can indicate how much power is stored in the rechargeable battery.

If the second hand advances to the;

- 1 position the watch has between approximately 1 and 7 days.
- 2 position the watch has between 7 days and 1 month.
- 4 position the watch has between 1 and 4 months.
- 6 position the watch has between 4 and 6 months.

KINETIC GMT (5M85)

- Hour, minute, second, 24-hour hand.
- Calendar (Date).
- Automatic Power Generator.
- Energy Depletion Forewarning.
- Overcharge Prevention Function.
- 6 Month Power Storage.

**HOW TO START THE WATCH**

1. Swing the watch from side to side.
* Swing rhythmically at a rate of twice a second.
2. Charge the KINETIC E.S.U. sufficiently.
3. Set the time/calendar and put on the watch.

POWER RESERVE INDICATOR

1. Press the button at the 2 o'clock position.

To allow easy reading of the second hand, press the button when the second hand is at the 12 o'clock position.

★ QUICK MOVEMENT OF SECOND HAND	5 seconds	10 seconds	20 seconds	30 seconds
POWER RESERVE	Between 1 and 7 days	Between 7 days and 1 month	Approx. 1 month	Approx. between 4 and 6 months

* The second hand will resume normal movement after the indicated 5, 10, 20 or 30 seconds have elapsed.

HOW TO SET TIME

When setting the time, ensure that the watch is working: the second hand is moving at one-second intervals.

- In a case that the watch is completely stopped due to a shortage of stored electrical energy, recharge the watch until the second hand resumes the normal one-second interval movement, and then reset the time and calendar.
- The 24-hour hand can be used in two ways. Since the time setting procedure differs according to the usage, please choose the method before setting the time.

Method 1

Simply using the 24-hour hand to show the 24-hour time as an AM/PM indicator.

- This is the standard usage for the 24-hour hand.

Method 2

Using the 24-hour hand to indicate the time in a different time zone.

- For instance, by setting the 24-hour hand to GMT while setting the hour and minute hands to indicate the time in your area, you can easily check GMT with the 24-hour hand at any time.

HOW TO SET THE 24-HOUR HAND AS A REGULAR 24-HOUR INDICATOR**<When method 1 usage is selected>**

1. Pull out the crown to the second click.
2. Turn the crown to set the 24-hour and minute hands to the current time.
3. Push the crown back in simultaneously with a time signal.
4. Pull out the crown to the first click.
5. Turn the crown to set the hour hand to the current hour.
6. Push the crown back in upon completion of time setting.

HOW TO SET THE 24-HOUR HAND AS A REGULAR 24-HOUR INDICATOR**<When method 2 usage is selected>**

1. Pull out the crown to the second click.
2. Turn the crown to set the 24-hour and minute hands to the time in the "different time zone area" you wish to set.
3. Push the crown back in simultaneously with a time signal.
4. Pull out the crown to the first click.
5. Turn the crown to set the hour hand to the current hour.
6. Push the crown back in upon completion of time setting.

HOW TO SET THE DATE

- This watch is designed so that the date changes one day by turning the hour hand two full rotations in the same way as in "the time difference adjustment function."
 - The date advances one day by turning the hour hand two full rotations clockwise, while the date is set back one day by turning the hour hand two full rotations counterclockwise.
 - After setting the time, it is necessary to set the date. Manual date adjustment is required on the first day after a month that has less than 31 days.
1. Pull out the crown to the first click.
 2. Each time the hour hand makes two full rotations by turning the crown, the date is adjusted one day.
 3. After completing the date setting, check the position of the hour hand once again and push the crown back in.

HOW TO ADJUST THE TIME DIFFERENCE

- While staying in a place in a different time zone area from where you live, you can conveniently set the watch to indicate the local time in the place where you are staying without stopping the watch.
 - The time difference adjustment function is interrelated with the date display. If the time difference is correctly adjusted, the watch displays the correct date of the place where you are staying.
1. Pull out the crown to the first click.
 2. Turn the crown to set the hour hand to indicate the time of the place where you are staying. The hour hand is independently set to the current hour.
 3. After completing the time difference adjustment, check the position of the hour hand once again and push the crown back in.

OPERATING INSTRUCTIONS

CHRONOGRAPH (6T63)

- Hour, Minute, seconds hand
- 24 hour hand
- Calendar
- Stopwatch measures 60 minutes in 1/5th of a second increments.

HOW TO START THE WATCH

- Pull crown out to the first click position (unscrew crown if your watch is fitted with this feature).
- Turn crown counter clockwise until the previous day's date appears.
- Pull crown out to second click position.
- Turn counter clockwise to advance the hour and minute hands past 12am. Doing so will advance the date to the current date.
- Set hour and minute hands to desired time. Ensure you consider AM/PM period.
- Push crown back in completely. (Ensure you screw crown back in if fitted with this feature).

HOW TO USE STOPWATCH

- The stopwatch can measure up to 60 minutes in 1/5th of a second increments.
- Press Button 'A' to start/stop/restart the stopwatch.
- Press Button 'B' to split/split release/reset the stopwatch.
- Do not press Buttons 'A' and 'B' at the same time, or press one of the two buttons while keeping the other pressed.

AUTOMATIC ANALOGUE (7S26/7S36)

- Hour, Minute, Seconds (24 hour hand for 4R39)
- Calendar, Day Of the Week (4R36)
- Powered by movement or winding the crown

HOW TO START THE WATCH

To initially start your watch:

Swing it from side to side in a horizontal arc for about 30 seconds. This is an automatic mechanical watch.

- * If the watch is worn on the wrist, the mainspring will be wound automatically through normal wrist movement.
- * If the watch is used without being wound up sufficiently, gain or loss of the watch may result. To avoid this, wear the watch for more than 8 hours a day.

HOW TO SET THE TIME, DAY AND DATE

- Check that the watch is operating, and then set the time, day and date.
 - The watch is provided with a day and date function and is so designed that the day and date changes once every 24 hours. The date changes around 12 o'clock midnight, and the day around 4:00 a.m. If AM/PM is not properly set, the date will change around 12 o'clock noon, and the day around 4:00 p.m.
1. Pull out the crown to the first click. (The second hand continues moving and the accuracy of the watch is unimpaired.)
 2. The day can be set by turning the crown clockwise.
 3. The date can be set by turning the crown counterclockwise. Turn it until the previous day's date appears.
Ex.) If today is the 5th of the month, first set the date to "4" by turning the crown counterclockwise.
 4. Pull out the crown to the second click when the second hand is at the 12 o'clock position. (The second hand stops on the spot.)
Turn the crown to advance the hands until the date changes to the next. The time is now set for the a.m. period. Advance the hands to set the correct time.
 5. Push the crown back in to the normal position in accordance with a time signal.

ACCURACY OF MECHANICAL WATCHES

- The accuracy of mechanical watches is indicated by the daily rates of one week or so. (Around 25 seconds per day +/-)
 - The accuracy of mechanical watches may not fall within the specified range of time accuracy because of loss/gain changes due to the conditions of use, such as the length of time during which the watch is worn on the wrist, arm movement, whether the mainspring is wound up fully or not, etc.
 - The key components in mechanical watches are made of metals which expand or contract depending on temperatures due to metal properties.
- This exerts an effect on the accuracy of the watches. Mechanical watches

tend to lose time at high temperatures while they tend to gain time at low temperatures.

- In order to improve accuracy, it is important to regularly supply energy to the balance that controls the speed of the gears. The driving force of the mainspring that powers mechanical watches varies between when it is fully wound and immediately before it is unwound. As the mainspring unwinds, the force weakens. Relatively steady accuracy can be obtained by wearing the watch on the wrist frequently for the self-winding type and winding up the mainspring fully everyday at a fixed time to move it regularly for the wind-up mechanical type.
- When affected by external strong magnetism, a mechanical watch may loss/gain time temporarily. The parts of the watch may become magnetized depending on the extent of the effect. In such a case, consult the retailer from whom the watch was purchased since the watch requires repair, including demagnetizing.

OPERATING INSTRUCTIONS

CHRONOGRAPH (7T04)

- Hour, minute and small second hands.
- Calendar (Date).
- Stopwatch minute, and 1/5th second hands.
- Stopwatch measures up to 60 minutes in 1/5th of a second increments.
- 24 hour hand

HOW TO SET TIME AND DATE

- Pull crown out to the first click position (unscrew crown if your watch is fitted with this feature).
- Turn crown counter clockwise until the previous day's date appears.
- Pull crown out to second click position.
- Turn counter clockwise to advance the hour and minute hands past 12am. Doing so will advance the date to the current date.
- Set hour and minute hands to desired time. Ensure you consider AM/PM period.
- Push crown back in completely. (Ensure you screw crown back in if fitted with this feature).

HOW TO USE STOPWATCH

- The stopwatch can measure up to 60 minutes in 1/5th of a second increments.
- Press Button 'A' to start/stop/restart the stopwatch.
- Press Button 'B' to split/split release/reset the stopwatch.
- Do not press Buttons 'A' and 'B' at the same time, or press one of the two buttons while keeping the other pressed.

CHRONOGRAPH (7T12)

- Hour, minute, seconds hand
- 24 hour hand
- Calendar
- Stopwatch measures 60 minutes in 1/5th of a second increments

**HOW TO SET TIME AND DATE**

- Pull crown out to the first click position (unscrew crown if your watch is fitted with this feature).
- Turn crown counter clockwise until the previous day's date appears.
- Pull crown out to second click position.
- Turn counter clockwise to advance the hour and minute hands past 12am. Doing so will advance the date to the current date.
- Set hour and minute hands to desired time. Ensure you consider AM/PM period.
- Push crown back in completely. (Ensure you screw crown back in if fitted with this feature).

HOW TO USE STOPWATCH

- The stopwatch can measure up to 60 minutes in 1/5th of a second increments.
- Press Button 'A' to start/stop/restart the stopwatch.
- Press Button 'B' to split/split release/reset the stopwatch.
- Do not press Buttons 'A' and 'B' at the same time, or press one of the two buttons while keeping the other pressed.

OPERATING INSTRUCTIONS

ALARM CHRONOGRAPH (7T62)

- Hour, minute and small second hands.
- Calendar (Date).
- Stopwatch minute and 1/5th second hands.
- Stopwatch measures up to 60 minutes in 1/5th of a second increments.
- Alarm can be set on a 12 hour basis, or can be used as a second time zone.

HOW TO SET TIME AND DATE

1. Pull crown out to the first click position (unscrew crown if your watch is fitted with this feature).
2. Turn crown counter clockwise until the previous day's date appears.
3. Pull crown out to second click position.
4. Turn counter clockwise to advance the hour and minute hands past 12am. Doing so will advance the date to the current date.
5. Set hour and minute hands to desired time. Ensure you consider AM/PM period.
6. Push crown back in completely. (Ensure you screw crown back in if fitted with this feature.)

HOW TO SET ALARM TIME

1. Pull the crown out to the second click position.
2. Press 'B' to set the alarm hour and minute hands to the correct time.
3. Push the crown back to the normal position. Once the time is set, you do not have to adjust again unless there is a change in time (e.g. daylight savings).
4. For a dual time zone adjust hands on any desired time.

HOW TO SET ALARM

1. Pull the crown to the first click position.
2. Press button 'B' to set the alarm hour and minute hands to desired alarm time.
3. Push the crown back to the normal position.

Note: Alarm setting on a 12 hour basis only. Alarm will ring at the designated time for 20 seconds; one time only alarm. The alarm needs to be reset in order to re-engage the alarm function.

HOW TO USE STOPWATCH

The stopwatch can measure up to 60 minutes in 1/5th of a second increments.

Press Button 'A' to start, stop and restart the stopwatch.

- Press Button 'A' to start/stop/restart the stopwatch.

- Press Button 'B' to split/split release/reset the stopwatch.

- * Do not press Buttons 'A' and 'B' at the same time, or press one of the two buttons while keeping the other pressed.

HOW TO ADJUST HAND POSITION

1. If chronograph hands will not return the 12 o'clock position when the chronograph is reset or when the battery is replaced with a new one, follow the procedure below to reset the hands to the correct position.
 2. Pull crown out to the second click.
 - Press and hold button 'A'. The stopwatch minute hand will sweep around dial. Press button 'B' to adjust minute hand.
 - Press and hold button 'A'. The stopwatch 1/5th of a second hand will sweep around dial. Press button 'B' to adjust 1/5th of a second hand.
 3. Push crown back into normal position.

Note: Holding in button 'B' when adjusting the hand position, hands will move faster.

HOW TO USE ALARM DIAL AS DUAL TIME DISPLAY

1. Pull the crown out to the second click position.
2. Press the button "B" to set the hour and minute hands to time of a different time zone.
3. Push the crown back to normal position.

CHRONOGRAPH PERPETUAL (7T86)

- Time.
- Day/Date indicator.
- Month/Year check on demand.
- Stopwatch measures 24 hours in 1/5th of a second increments.
- Alarm – 24 hour.
- Perpetual Calendar automatically adjusts until Feb 2100.

**HOW TO CHANGE MODE**

Press Button B to change mode from 'Calendar/Alarm Mode' to 'Stopwatch Mode'.

HOW TO SET TIME AND ALARM DIAL TIME

- 1) Pull crown out to 2nd click when the small second hand is at the 60 second mark. The small second hand will stop immediately.
- 2) Turn the crown to set the main dial time.
- 3) Press button B to set the alarm sub-dial time in 24 hour format.
E.g 6pm is 18:00.

HOW TO ADJUST PERPETUAL CALENDAR

- 1) Pull crown out to 1st Click.
- 2) Press button A for 5 seconds – the calendar hand will sweep around the dial.
- 3) Press B to set the date (hand will move quickly if kept pressed).
- 4) Press A once and the day indicator will point to CHR.
- 5) Press B to adjust the day of the week.
- 6) Press A and the calendar hand will point to the month.
- 7) Press B to adjust the month.
- 8) Press A and the calendar hand will point to the leap year indicators.
- 9) Press B to set the year (you must know the number of years elapsed since last leap year).
- 10) Press A to return to Date setting mode.
- 11) Press the crown back to the normal position.

HOW TO USE THE STOPWATCH

- 1) In the normal crown model Press B, and the Day/Mode hand will point to CHR.
- 2) Press Button A to start and stop the stopwatch.
- 3) Press Button B to reset the stopwatch.
- 4) To perform split/lap times Press button B while the stopwatch is running, then B to release the hands to continue with timing.

HOW TO USE THE ALARM

Ensure you have set the time of the alarm dial under the 'HOW TO SET TIME & ALARM DIAL'.

- 1) Pull crown out to first click.
- 2) Press Button B set desired alarm time (keeping button B pressed will make the hands move faster) This dial is a 24 hour dial, so 6pm is 18:00.
- 3) After desired time has been set press the crown back to the normal position. Alarm will sound for 20 seconds at desired time. To turn off alarm press Button A or B. To cancel an alarm set, pull crown out to first click and then press crown back to normal position.

OPERATING INSTRUCTIONS

CHRONOGRAPH (7T92)

- Hour, minute and small second hands. Calendar (Date).
- Stopwatch hour, minute, second and 1/20th second hands.
- Stopwatch measures up to 12 hours in 1/20th of a second increments.

HOW TO SET TIME AND DATE

1. Pull crown out to the first click position (unscrew crown if your watch is fitted with this feature).
2. Turn crown counter clockwise until the previous day's date appears.
3. Pull crown out to second click position.
4. Turn counter clockwise to advance the hour and minute hands past 12am. Doing so will advance the date to the current date.
5. Set hour and minute hands to desired time. Ensure you consider AM/PM period.
6. Push crown back in completely. (Ensure you screw crown back in if fitted with this feature.)

HOW TO USE STOPWATCH

The stopwatch can measure up to 12 hours in 1/20th of a second increments.

- Press Button 'A' to start/stop/restart the stopwatch.
 - Press Button 'B' to split/split release/reset the stopwatch.
- * Do not press Buttons 'A' and 'B' at the same time, or press one of the two buttons while keeping the other pressed.

CHRONOGRAPH (8T63)

- Hour, minute, seconds hand
- 24 hour hand
- Calendar
- Stopwatch measures 60 minutes in 1/5th of a second increments

**HOW TO SET TIME AND DATE**

- Pull crown out to the first click position (unscrew crown if your watch is fitted with this feature).
- Turn crown counter clockwise until the previous day's date appears.
- Pull crown out to second click position.
- Turn counter clockwise to advance the hour and minute hands past 12am. Doing so will advance the date to the current date.
- Set hour and minute hands to desired time. Ensure you consider AM/PM period.
- Push crown back in completely. (Ensure you screw crown back in if fitted with this feature).

HOW TO USE STOPWATCH

- The stopwatch can measure up to 60 minutes in 1/5th of a second increments.
- Press Button 'A' to start/stop/restart the stopwatch.
- Press Button 'B' to split/split release/reset the stopwatch.
- Do not press Buttons 'A' and 'B' at the same time, or press one of the two buttons while keeping the other pressed.

OPERATING INSTRUCTIONS

CHRONOGRAPH (8T67)

- Hour, minute and small second hands. Calendar (Date).
- Stopwatch hour, minute, second and 1/20th second hands.
- Stopwatch measures up to 12 hours in 1/20th of a second increments.

HOW TO SET TIME AND DATE

1. Pull crown out to the first click position (unscrew crown if your watch is fitted with this feature).
2. Turn crown counter clockwise until the previous day's date appears.
3. Pull crown out to second click position.
4. Turn counter clockwise to advance the hour and minute hands past 12am.
Doing so will advance the date to the current date.
5. Set hour and minute hands to desired time. Ensure you consider AM/PM period.
6. Push crown back in completely. (Ensure you screw crown back in if fitted with this feature.)

HOW TO USE STOPWATCH

The stopwatch can measure up to 12 hours in 1/20th of a second increments.

- Press Button 'A' to start/stop/restart the stopwatch.
 - Press Button 'B' to split/split release/reset the stopwatch.
- * Do not press Buttons 'A' and 'B' at the same time, or press one of the two buttons while keeping the other pressed.

SOLAR ALARM CHRONOGRAPH (V172)

- Time/calendar.
- 60-Minute stopwatch in 1/5-second increments with split time measurement function.
- Single-time alarm within 12 hours.
- Powered by light energy.
- No battery change required.
- Lasts for 6 months after full charge.
- Energy depletion forewarning function.
- Overcharging prevention function.

MAKING ADJUSTMENTS TO THE WATCH

This watch is designed so that the following adjustments are made with the crown at the second click position:

1. main time setting
2. alarm hand adjustment
3. stopwatch hand position adjustment

Once the crown is pulled out to the second click, be sure to check and adjust 1. and 2. at the same time. If needed, 3. should also be adjusted then.

HOW TO SET TIME

1. Pull out crown to the second click when the second hand is at the 12 o'clock position.
2. Turn the crown to set the hour and minute hands.

HOW TO ADJUST THE ALARM HANDS

1. Press 'B' repeatedly to set the ALARM hands to the time indicated by the main time hands.

HOW TO ADJUST STOPWATCH HAND POSITION

If the STOPWATCH hands are not in the "0" position, follow the procedure below to set them to the "0" position.

1. Press 'A' for 2 seconds.
2. Press 'B' repeatedly to set the STOPWATCH minute hand to the "0" position.
3. Press 'A' for 2 seconds.
4. Press 'B' repeatedly to set the STOPWATCH 1/5-second hand to the "0" position.

HOW TO SET DATE

Before setting the date, be sure to set the main time.

1. Pull the crown out to the first click.
2. Turn the crown clockwise until the desired date appears.
3. Push the crown back into the normal position.

HOW TO USE STOPWATCH

The stopwatch can measure up to 60 minutes in 1/5-second increments. When the measurement reaches 60 minutes, the stopwatch automatically stops.

Split time measurement is available.

Before using the stopwatch, be sure to check that the crown is set at the normal position and that the STOPWATCH hands are reset to the "0" position.

HOW TO RESET STOPWATCH

While the stopwatch hands are moving:

1. Press Button 'A' to stop the stopwatch.
2. Press Button 'B' to reset the stopwatch.

When the stopwatch is stopped:

1. Press Button 'B' to reset the stopwatch.

When the split time measurement is displayed while the stopwatch is measuring:

1. Press Button 'B' to release the split time display. The stopwatch hands move quickly, and then indicate the measurement in progress.

2. Press Button 'A' to stop the stopwatch.

3. Press Button 'B' to reset the stopwatch.

When the split time measurement is displayed and the stopwatch is stopped:

1. Press Button 'B' to release the split time display. The stopwatch hands move quickly, and then stop.
2. Press Button 'B' to reset the stopwatch.

HOW TO SET ALARM

The alarm can be set to ring only once at a designated time within the coming 12 hours.

- The alarm time can be set in one minute increments.
- You can preview the alarm sound by using the sound demonstration function.

Before using the alarm, check that the ALARM hands are adjusted to the current time.

1. Pull the crown out to the first click.
2. Press 'B' repeatedly to set the desired alarm time.
3. Push the crown back into the normal position.

At the designated time the alarm rings for 20 seconds, and it is automatically disengaged as it stops. To stop it manually, press Button A or B.

HOW TO CHARGE AND START THE WATCH

When you start the watch or when the energy in the rechargeable battery is reduced to an extremely low level, charge it sufficiently by exposing the watch to light.

1. Expose the watch to sunlight or strong artificial light.
2. Keep the watch exposed to the light until the second hand moves at 1-second intervals.
3. When the watch is charged after it has completely stopped, set the date and time before wearing the watch.

GUIDELINE OF CHARGING TIME/ACCURACY

Environment/Lightsource (lux)	V172		
	A (minutes)	B (hours)	C (hours)
General offices/ Fluorescent light (700)	150	60	-
30W20cm/ Fluorescent light (3000)	33	13	110
Cloudy weather/Sunlight (10000)	9	3.5	30
Fair weather/Sunlight (100000)	2	0.6	5
Expected life per charge from full charge to stoppage	6 months		
Loss/gain (monthly rate)	Less than 15 seconds when the watch is worn on your wrist at a normal temperature range (5 °C to 35 °C)		
Operational temperature range	-10 °C to 60 °C		

A: Time to charge 1 day of power

B: Time required for steady operation

C: Time required for full charge

The above table provides only a general guideline.

OPERATING INSTRUCTIONS

SOLAR CHRONOGRAPH (V175)

- Time/calendar
- 60-Minute stopwatch in 1/5-second increments with split time
- Measurement function
- Powered by light energy
- No battery change required
- Lasts for 6 months after full charge
- Energy depletion forewarning function
- Overcharging prevention function

HOW TO SET TIME AND DATE

- Pull crown out to the first click position (unscrew crown if your watch is fitted with this feature).
- Turn crown counter clockwise until the previous day's date appears.
- Pull crown out to second click position.
- Turn counter clockwise to advance the hour and minute hands past 12am. Doing so will advance the date to the current date.
- Set hour and minute hands to desired time. Ensure you consider AM/PM period.
- Push crown back in completely. (Ensure you screw crown back in if fitted with this feature).

HOW TO USE STOPWATCH

- The stopwatch can measure up to 60 minutes in 1/5th of a second increments.
- Press Button 'A' to start/stop/restart the stopwatch.
- Press Button 'B' to split/split release/reset the stopwatch.
- Do not press Buttons 'A' and 'B' at the same time, or press one of the two buttons while keeping the other pressed.

Environment/Lightsource (lux)	V175		
	A (minutes)	B (hours)	C (hours)
General offices/ Fluorescent light (700)	150	60	-
30W20cm/ Fluorescent light (3000)	33	13	110
Cloudy weather/Sunlight (10000)	9	3.5	30
Fair weather/Sunlight (100000)	2	0.6	5
Expected life per charge from full charge to stoppage	6 months

Operational temperature range	-10 °C to 60 °C		

A: Time to charge 1 day of power

B: Time required for steady operation

C: Time required for full charge

❖ The above table provides only a general guideline.

GUIDELINE OF CHARGING TIME/ACCURACY

The watch operates while charging electricity by converting light received on the dial to electrical energy. It cannot properly operate unless the remaining energy is sufficient. Place or store the watch in a location receiving light etc., to sufficiently charge electricity.

- When the watch is stopped or the second hand starts moving at 2-second intervals, charge the watch by exposing it to light.
- The time required for charging the watch varies depending on the calibres.

Check the calibre of your watch engraved on the back cover.

- It is recommended that the watch be charged for as long as the charging time "B" to assure the stable movement of the watch.

ENERGY DEPLETION FOREWARNING FUNCTION

- When the energy stored in the rechargeable battery is reduced to an extremely low level, the second hand starts moving at 2-second intervals instead of the normal 1-second intervals. The watch remains accurate even while the second hand is moving at 2-second intervals.
- While the second hand is moving at 2-second intervals, the stopwatch cannot be activated.
- If the second hand starts to move at 2-second intervals while the stopwatch is operating, the stopwatch will be automatically stopped and the stopwatch hands will return to the "0" position.
- When this occurs, recharge the watch as soon as possible by exposing it to light. Otherwise, the watch may stop operating in a few days.

TO PREVENT THE ENERGY DEPLETION

- When wearing the watch, make sure that the watch is not covered by clothing.
- When the watch is not in use, leave it in a bright place as long as possible.

NOTE ON POWER SUPPLY

- The battery used in this watch is a rechargeable battery, which is different from ordinary silver oxide batteries. Unlike other disposable batteries such as dry-cell batteries or button cells, this rechargeable battery can be used over and over again by repeating the cycles of discharging and recharging.
- The capacity or recharging efficiency of the rechargeable battery may gradually deteriorate for various reasons such as long-term use or usage conditions. Worn or contaminated mechanical parts or degraded oils may also shorten recharging cycles. If the efficiency of the rechargeable battery decreases, it will be necessary to have the watch repaired.

CAUTION

- Do not remove the rechargeable battery yourself. Replacement of the rechargeable battery requires professional knowledge and skill. Please ask a watch retailer for replacement of the rechargeable battery.
- Installation of an ordinary silver oxide battery can generate heat that can cause bursting and ignition.

SOLAR CHRONOGRAPH (V176)

- Time/calendar
- 60-Minute stopwatch in 1/20th second increments with split time
- Powered by light energy
- No battery change required
- Lasts for 6 months after full charge
- Energy depletion forewarning function
- Overcharging prevention function

**HOW TO SET TIME AND DATE**

- Pull crown out to the first click position (unscrew crown if your watch is fitted with this feature).
- Turn crown counter clockwise until the previous day's date appears.
- Pull crown out to second click position.
- Turn counter clockwise to advance the hour and minute hands past 12am. Doing so will advance the date to the current date.
- Set hour and minute hands to desired time. Ensure you consider AM/PM period.
- Push crown back in completely. (Ensure you screw crown back in if fitted with this feature).

HOW TO USE STOPWATCH

- The stopwatch can measure up to 60 minutes in 1/20th of a second increments.
- Press Button 'A' to start/stop/restart the stopwatch.
- Press Button 'B' to split/split release/reset the stopwatch.
- Do not press Buttons 'A' and 'B' at the same time, or press one of the two buttons while keeping the other pressed.

Environment/Lightsource (lux)	V176		
	A (minutes)	B (hours)	C (hours)
General offices/ Fluorescent light (700)	150	60	-
30W/20cm/ Fluorescent light (3000)	33	13	110
Cloudy weather/Sunlight (10000)	9	3.5	30
Fair weather/Sunlight (100000)	2	0.6	5
Expected life per charge from full charge to stoppage	6 months		
Loss/gain (monthly rate)	Less than 15 seconds when the watch is worn on your wrist at a normal temperature range (5 °C to 35 °C)		
Operational temperature range	-10 °C to 60 °C		

A: Time to charge 1 day of power

B: Time required for steady operation

C: Time required for full charge

❖ The above table provides only a general guideline.

GUIDELINE OF CHARGING TIME/ACCURACY

The watch operates while charging electricity by converting light received on the dial to electrical energy. It cannot properly operate unless the remaining energy is sufficient. Place or store the watch in a location receiving light etc., to sufficiently charge electricity.

- When the watch is stopped or the second hand starts moving at 2-second intervals, charge the watch by exposing it to light.
- The time required for charging the watch varies depending on the calibres. Check the calibre of your watch engraved on the back cover.

- It is recommended that the watch be charged for as long as the charging time "B" to assure the stable movement of the watch.

ENERGY DEPLETION FOREWARNING FUNCTION

- When the energy stored in the rechargeable battery is reduced to an extremely low level, the second hand starts moving at 2-second intervals instead of the normal 1-second intervals. The watch remains accurate even while the second hand is moving at 2-second intervals.
- While the second hand is moving at 2-second intervals, the stopwatch cannot be activated.
- If the second hand starts to move at 2-second intervals while the stopwatch is operating, the stopwatch will be automatically stopped and the stopwatch hands will return to the "0" position.
- When this occurs, recharge the watch as soon as possible by exposing it to light. Otherwise, the watch may stop operating in a few days.

TO PREVENT THE ENERGY DEPLETION

- When wearing the watch, make sure that the watch is not covered by clothing.
- When the watch is not in use, leave it in a bright place as long as possible.

NOTE ON POWER SUPPLY

- The battery used in this watch is a rechargeable battery, which is different from ordinary silver oxide batteries. Unlike other disposable batteries such as dry-cell batteries or button cells, this rechargeable battery can be used over and over again by repeating the cycles of discharging and recharging.
- The capacity or recharging efficiency of the rechargeable battery may gradually deteriorate for various reasons such as long-term use or usage conditions. Worn or contaminated mechanical parts or degraded oils may also shorten recharging cycles. If the efficiency of the rechargeable battery decreases, it will be necessary to have the watch repaired.

CAUTION

- Do not remove the rechargeable battery yourself. Replacement of the rechargeable battery requires professional knowledge and skill. Please ask a watch retailer for replacement of the rechargeable battery.
- Installation of an ordinary silver oxide battery can generate heat that can cause bursting and ignition.

OPERATING INSTRUCTIONS

SOLAR CHRONOGRAPH (V192/V194)

- Time/calendar
- 60-Minute stopwatch in 1/5-second increments with split time
- Measurement function
- Powered by light energy
- No battery change required
- Lasts for 6 months after full charge
- Energy depletion forewarning function
- Overcharging prevention function

HOW TO SET TIME AND DATE

- Pull crown out to the first click position (unscrew crown if your watch is fitted with this feature).
- Turn crown counter clockwise until the previous day's date appears.
- Pull crown out to second click position.
- Turn counter clockwise to advance the hour and minute hands past 12am. Doing so will advance the date to the current date.
- Set hour and minute hands to desired time. Ensure you consider AM/PM period.
- Push crown back in completely. (Ensure you screw crown back in if fitted with this feature).

HOW TO USE STOPWATCH

- The stopwatch can measure up to 60 minutes in 1/5th of a second increments.
- Press Button 'A' to start/stop/restart the stopwatch.
- Press Button 'B' to split/split release/reset the stopwatch.
- Do not press Buttons 'A' and 'B' at the same time, or press one of the two buttons while keeping the other pressed.

When you reset the stopwatch the minute hand will return to indicate the power reserve.

GUIDELINE OF CHARGING TIME/ACCURACY

The watch operates while charging electricity by converting light received on the dial to electrical energy. It cannot properly operate unless the remaining energy is sufficient. Place or store the watch in a location receiving light etc., to sufficiently charge electricity.

- When the watch is stopped or the second hand starts moving at 2-second intervals, charge the watch by exposing it to light.
- The time required for charging the watch varies depending on the calibres. Check the calibre of your watch engraved on the back cover.
- It is recommended that the watch be charged for as long as the charging time "B" to assure the stable movement of the watch.

When the stopwatch is not operating the stopwatch minute hand will indicate the power reserve in the gradation next to the stopwatch minute dial.

ENERGY DEPLETION FOREWARNING FUNCTION

- When the energy stored in the rechargeable battery is reduced to an extremely low level, the second hand starts moving at 2-second intervals instead of the normal 1-second intervals. The watch remains accurate even while the second hand is moving at 2-second intervals.
- While the second hand is moving at 2-second intervals, the stopwatch cannot be activated.
- If the second hand starts to move at 2-second intervals while the stopwatch

is operating, the stopwatch will be automatically stopped and the stopwatch hands will return to the "0" position.

- When this occurs, recharge the watch as soon as possible by exposing it to light. Otherwise, the watch may stop operating in a few days.

TO PREVENT THE ENERGY DEPLETION

- When wearing the watch, make sure that the watch is not covered by clothing.
- When the watch is not in use, leave it in a bright place as long as possible.

SOLAR WORLD TIME CHRONOGRAPH (V195)

- Solar – Powered by any light.
- Time
- Calendar
- Stopwatch measures 24 hours in 1/5th of a second increments with split time.
- Alarm - 24-hour with quick on/off function
- World Time – 25 cities pre-programmed.

- a. Normal position
 b. First click position: alarm setting, date setting
 c. Second click position: time setting, world time preliminary position adjustment, hand position adjustment

HOW TO CHANGE MODE

When the watch is pointing at the 'POWER RESERVE INDICATOR' Press Button A to move to stopwatch mode. The stopwatch will start counting immediately.

When the watch is in 'STOPWATCH' mode, and the watch is not counting, Press Button B to return to 'POWER RESERVE INDICATOR' mode. If the stopwatch is counting, pressing Button B will operate the Split time instead of returning to 'POWER RESERVE INDICATOR' mode. Stopwatch operation is detailed below.

HOW TO SET TIME, DATE AND ALARM/WORLD TIME DIAL

- 1) Pull crown out to 1st click and turn the crown to adjust the date to the previous day. Pull the crown out to the 2nd click when the small second hand is at the 60 second mark. The small second hand will stop immediately.
- 2) Turn the crown to set the main hands dial time.
- 3) Press Button A so the large hand lines up with your current time zone. With each Press of Button A the second hand will move to the next city detailed on the bezel or inner ring.
- 4) Press button B to set the Alarm/World Time sub-dial time in 24 hour format to your current timezone. Eg. 6pm is 18:00.

HOW TO USE THE STOPWATCH

- 1) In the normal crown mode Press Button A, and the Stopwatch will start
- 2) Press Button A to stop the stopwatch.
- 3) Press Button B to reset the stopwatch.
- 4) To perform split/lap times Press button B while the stopwatch is running, then B to release the hands to continue with timing.

Each indication may differ depending on the model (design) of the watch.

Indication	City hand positions	Names of representative cities (Time Zone)	Time difference from GMT/UTC
LON	0-second position	London	±0 hours
PAR/ROM	3-second position	Paris/Rome	+1 hour
CAI	6-second position	Cairo	+2 hours
JED	8-second position	Jeddah	+3 hours
DXB	11-second position	Dubai	+4 hours
KHI	13-second position	Karachi	+5 hours
DAC	15-second position	Dhaka	+6 hours
BKK	18-second position	Bangkok	+7 hours
HKG/BJS	21-second position	Hong Kong/Beijing	+8 hours
TYO	23-second position	Tokyo	+9 hours
SYD	25-second position	Sydney	+10 hours
NOU	28-second position	Nouméa	+11 hours

HOW TO USE THE ALARM

Ensure you have set the time of the alarm dial under the 'HOW TO SET TIME, DATE & ALARM/WORLD TIME DIAL'.

- 1) Pull crown out to first click. The top dial indicator will point to AL
- 2) Press B to set desired alarm time (keeping button pressed will make the hands move faster). This dial is a 24 hour dial, so 6pm is 18:00.
- 3) After desired time has been set Press Button A to turn the alarm on. The large hand will move to the 9 second mark to indicate the Alarm is ON. To turn the alarm off, Press Button A again and the large hand will move to the 51 second mark to indicate OFF. Push the crown back to the normal position.

Alarm will sound for 20 seconds at desired time every day until it is turned off. To silence the alarm press Button A or B while the alarm is sounding.

HOW TO USE WORLD TIME

The local time throughout the world can be displayed in the bottom dial.

How to select world timezones

- 1) Press and hold Button B for 3 seconds. The top dial indicator moves to WT. The large hand will move to the current city on the bezel or inner ring that the bottom dial is set on.
- 2) Press Button A to advance one city. Press Button B to decrease by one city detailed on the bezel or inner ring.
- 3) The hands in the bottom dial will automatically move to indicate the time of the city the large hand is pointing at.

Refer to the chart below for world timezones.

(As of March 2016)

Indication	City hand positions	Names of representative cities (Time Zone)	Time difference from GMT/UTC
WLG	30-second position	Wellington	+12 hours
TBU	32-second position	Nuku'alofa	+13 hours
MDY	34-second position	Midway Islands	-11 hours
HNL	36-second position	Honolulu	-10 hours
ANC	38-second position	Anchorage	-9 hours
LAX	41-second position	Los Angeles	-8 hours
DEN	43-second position	Denver	-7 hours
CHI	45-second position	Chicago	-6 hours
NYC	48-second position	New York	-5 hours
SDQ	50-second position	Santo Domingo	-4 hours
RIO	53-second position	Rio de Janeiro	-3 hours
FEN	55-second position	Fernando de Noronha	-2 hours
PDL	57-second position	Azores	-1 hour

OPERATING INSTRUCTIONS

SOLAR CHRONOGRAPH PERPETUAL (V198)

- Solar – Powered by any light.
- Time.
- Day/Date indicator.
- Month/Year check on demand.
- Stopwatch measures 24 hours in 1/5th of a second increments.
- Alarm – 24 hour.
- Perpetual Calendar automatically adjusts until Feb 2100.

HOW TO CHANGE MODE

Press Button B to change mode from 'Calendar/Alarm Mode' to 'Stopwatch Mode'.

HOW TO SET TIME AND ALARM DIAL TIME

- 1) Pull crown out to 2nd click when the small second hand is at the 60 second mark. The small second hand will stop immediately.
- 2) Turn the crown to set the main dial time.
- 3) Press button B to set the alarm sub-dial time in 24 hour format. E.g 6pm is 18:00.

HOW TO ADJUST PERPETUAL CALENDAR

- 1) Pull crown out to 2nd Click.
- 2) Press button A and the day of week hand will sweep around the dial.
- 3) Press B to set the day of week.
- 4) Press A once and the day indicator will point to date.
- 5) Press B to adjust the date.
- 6) Press A and the calendar hand will point to the month.
- 7) Press B to adjust the month.
- 8) Press A and the calendar hand will point to the leap year indicators.
- 9) Press B to set the year (you must know the number of years elapsed since last leap year).
- 10) Press A to return to Date setting mode.
- 11) Press the crown back to the normal position.

HOW TO USE THE STOPWATCH

- 1) In the normal crown mode Press B, and the Day/Mode hand will point to CHR.
- 2) Press Button A to start and stop the stopwatch.
- 3) Press Button B to reset the stopwatch.
- 4) To perform split/lap times Press button B while the stopwatch is running, then B to release the hands to continue with timing.

HOW TO USE THE ALARM

Ensure you have set the time of the alarm dial under the 'HOW TO SET TIME & ALARM DIAL'.

- 1) Pull crown out to first click.
- 2) Press A to advance or B to decrease to desired alarm time (keeping button pressed will make the hands move faster). This dial is a 24 hour dial, so 6pm is 18:00.
- 3) After desired time has been set press the crown back to the normal position. Alarm will sound for 20 seconds at desired time. To turn off alarm press Button A or B. To cancel an alarm set, pull crown out to first click and then press crown back to normal position.

SOLAR ANALOGUE

- Powered by light energy.
- No battery change required.
- Lasts for 2 to 12 months after full charge (depends on the calibre).
- Energy depletion forewarning function (for cal. V111, V117, V145, V147, V157, V158, V181, V182, V187 only).
- Instant-start function (for cal. V145, V147, V157, V158, V181, V182, V187 only).
- Overcharging prevention function.

**HOW TO CHARGE AND START THE WATCH**

When you start the watch or when the energy in the rechargeable battery is reduced to an extremely low level, charge it sufficiently by exposing the watch to light.

- Expose the watch to sunlight or strong artificial light.
- Keep the watch exposed to the light until the second hand moves at 1-second intervals.
- When the watch is charged after it has completely stopped, set the date and time before wearing the watch.

HOW TO SET TIME AND DATE

Models with two/three hands:

- Pull out the crown to the first click.
- Turn the crown to set the desired time.
- Push back the crown completely (in accordance with a time signal for a three-hand model.)

Models with date:

- Pull out the crown to the first click and set the previous date.
- Pull out the crown to the second click when the second hand is at the 12 o'clock position.
- Turn the crown until the desired date appears.
- Turn the crown to set the hour and minute hands to the desired time.
- Push back the crown completely in accordance with a time signal.

Models with day and date:

- Pull out the crown to the first click and set the previous day and date.
- Pull out the crown to the second click when the second hand is at the 12 o'clock position.
- Turn the crown until the desired day and date appears.
- Turn the crown to set the hour and minute hands to the desired time.
- Push back the crown completely in accordance with a time signal.

GUIDELINE OF CHARGING TIME/ACCURACY

Environment/Lightsource (lux)	V110			V111/V117		
	A (minutes)	B (hours)	C (hours)	A (minutes)	B (hours)	C (hours)

-5 °C to 50 °C								

A: Time to charge 1 day of power

B: Time required for steady operation

C: Time required for full charge

The above table provides only a general guideline.

ENERGY DEPLETION FOREWARNING FUNCTION

- If your watch has a second hand, when the energy stored in the rechargeable battery is reduced to an extremely low level, the second hand starts moving at 2-second intervals instead of the normal 1-second intervals. (Some calibres have no such function.) The watch remains accurate even while the second hand is moving at 2-second intervals.
- In that case, recharge the watch as soon as possible by exposing it to light. Otherwise, the watch may stop operating in about 3 days. (For recharging the watch, see "HOW TO CHARGE AND START THE WATCH")

To prevent the energy depletion:

- When wearing the watch, make sure that the watch is not covered by clothing.
- When the watch is not in use, leave it in a bright place as long as possible.

All SEIKO watches and clocks are covered by a 3 year guarantee. The guarantee covers defects in the material and workmanship from the date of purchase. As a SEIKO authorised dealer it is your responsibility to correctly fill in the guarantee with all the information required. The diagram on the right shows where to find the relevant information on the watch caseback.

In the case of incorrectly used guarantees, return them to SEIKO Australia or hand them to your SEIKO Australia Representative for free replacement, otherwise a charge for new guarantees will be applicable.

GLOBAL SERVICE NETWORK

SEIKO's dedication to quality extends throughout its service network in all corners of the world, extending the same dedication to excellence and the highest quality service to SEIKO customers everywhere.

For over 100 years SEIKO has stood for quality – in manufacture, design and service. Today, our SEIKO service centres strive to offer the highest standard of after-sales service and ensure lasting consumer satisfaction. In the Oceania Region, SEIKO Australia Pty Ltd has a network of branch offices, service centres and authorised service agents throughout Australia, New Zealand, Papua New Guinea, and the Pacific Islands.

For service, repairs and spare parts enquiries, please phone 1300 363 575 or email service@seiko.com.au

SERVICE

Replacement guarantee costs:

- Seiko, Pulsar & Lorus = \$5.50
- Astron & Grand Seiko = \$25.00
- Guarantee Exchange (One for one)
 - for incorrectly completed and/or damaged guarantees are replaced at no cost if returned

All brands replacement policies: (Varied based on situation)

- Under warranty Lorus – replaced or credited
- Manufacturing fault – not wear and tear

Seiko Quote Policy

for repairs

TRADE RETAIL

- | | | |
|-----------------|---------|---------|
| • Seiko & | | |
| Michel Herbelin | \$41.00 | \$70.00 |
| • Pulsar | \$37.00 | \$63.00 |

SPORTS TIMING & SPECIALTY CLOCKS

The world over, people have come to rely on the expert time keeping of SEIKO. Whether this be a major sporting event like the IAAF Championships which SEIKO have timed since 1987, or a Landmark clock, such as the Waco Department store in Japan, SEIKO has a timing solution for any need.

The extensive range of Sports Timing Equipment, and Landmark Clocks are now available in Australia.

Both catalogues can be found on our website
<http://www.seiko.com.au/pr-media/sports-timing>
